

## iWay Software Integration Services Consulting Packages

### Best-of-Breed Expertise and Solutions

iWay Integration Services provides expert design, systems architecture, implementation, and project management services for all your business integration projects. We help you:

- Focus on your core competencies
- Leverage key IT investments
- Maintain continuity of existing systems
- Rapidly implement business systems and realize ROI
- Implement solutions integrating legacy and commercial systems
- Provide guidance for best practices in SOA deployments
- Provide direction and technology transfer to ensure self-reliance and long-term support capabilities within the organization
- Rapidly acquire new skill sets

iWay Software offers 25- and 50-day consulting service packages designed for rapid implementations – allowing you to train your staff to be self-sufficient and achieve cycle-time reduction. We help you meet the ROI expectations that have been set, as well as the ability to support them and move forward with new integration efforts.

With a track record of success, iWay Software is committed to helping you achieve your business process integration at a fraction of the time and cost typically associated with integration projects.

**“Information Builders’ consulting services are top-notch, and the iWay specialists can help you develop a solid understanding of how to utilize their technology. To say that they were anything short of incredible would be an understatement. They addressed and fixed every issue that we put in front of them – and not just from a technical perspective, but from an organizational perspective as well. iWay is the kind of strategic partner we need.”**

Anand Ranganathan, Systems Integration Manager, Collections Etc.

## Deploying iWay Software Integration Projects

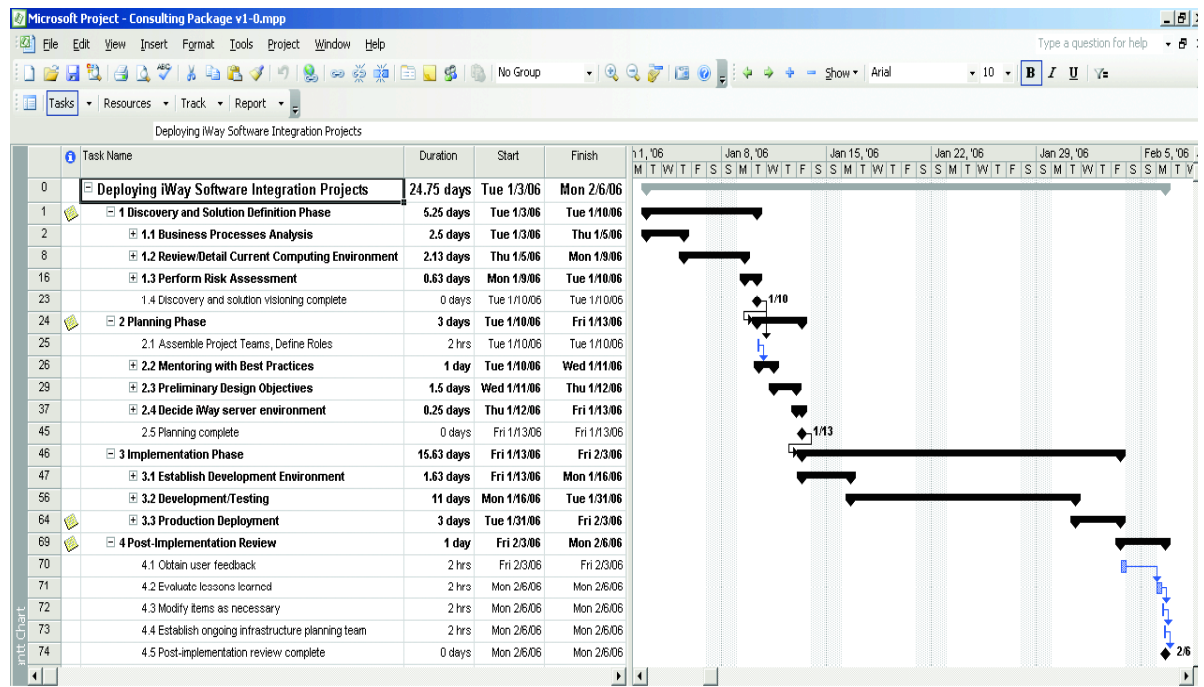

iWay Software's 25- and 50-day implementation packages consist of four main phases.

- **Discovery and solution definition** – Analysis and review of current business process and computing environments takes place, including a detailed risk assessment
- **Planning** – Best practices are followed to set preliminary design objectives
- **Implementation** – The development environment is established and tested, and production systems are deployed
- **Post-implementation review** – We obtain your feedback, evaluate the lessons learned, augment the plan as necessary, and plan for the future by establishing an ongoing infrastructure planning team

**“The consulting services were phenomenal. Information Builders helped with the ETL processes to migrate data from the mainframe and also helped us develop our first reporting environment. They were great to work with. It was a very fast and effective development cycle.”**

Jon Dawson, Project Manager, Holland America Line

Example of a 25-day iWay Software Integration Services Consulting Package. Modifications can be made to turn it into a 50-day package as well.
