- CIDX
- Comma-Delimited Files
- cXML
- EDI-ANSI X12 (American)
- EDI-EDIFACT
- EDIG@S
- EDIINT
- FIX

iWay Cloud Services For Amazon EC2

iWay + EC2/AWS Architecture

Conveniently and Economically Leverage Cutting-Edge Integration Technologies

The market for technologies delivered via a Software-as-a-Service (SaaS) model is exploding. Gartner predicts that global spending for on-demand solutions will reach approximately \$19.3 billion by 2011 – more than triple its size just five years earlier. This tremendous growth can be attributed to the many benefits that the SaaS approach – also known as hosted or on-demand software – can deliver. Some of those advantages include:

- No high initial investment or upfront licensing fees
- No need to purchase, deploy, or test expensive hardware and components
- Seamless integration with the Internet Cloud
- Dramatic reduction in administration requirements

Now, iWay Software’s robust, enterprise-scale integration solutions are available on-demand. With iWay SaaS on Amazon Elastic Cloud Computing (EC2), organizations can more conveniently and economically leverage powerful, cutting-edge integration technologies – without the need to install them on-site or devote IT resources to ongoing maintenance.

Additional adapters available upon request.

iWay's market-leading integration tools include a patented Universal Adapter Framework, which provides unparalleled connectivity to more than 300 information assets, as well as a state-of-the-art integration engine, which delivers enterprise-scale integration capabilities in an intuitive, graphical environment. By making these, and other iWay integration components, available on-demand, we are empowering companies of all sizes with simplified, more affordable access to all the innovative solutions they need to support a variety of critical integration initiatives, including:

- **Enterprise information management (EIM)**, to improve the creation, utilization, and maintenance of corporate data. Comprehensive quality management optimizes information integrity; data profiling enables accurate data-quality assessment; and enterprise search enhances information accessibility.
- **Business-to-business (B2B) integration**, to facilitate the rapid, effective management of trading partner and related activities by enhancing the way partner transactions, as well as those performed over external exchanges, are planned, executed, and tracked.
- **Business process automation (BPA)**, to automate and accelerate the execution of key workflows across an entire organization, while providing complete, unhindered, real-time visibility into all related activities.

Fast Deployment With Minimal Administration

iWay's SaaS-based solutions will be pre-installed and pre-configured as Amazon Images (AMIs) and fully hosted by Amazon, where they can then be made immediately available to subscribers. Clients simply select the desired operating system (Windows or Linux), choose the tools and components they wish to use, and indicate their virtual hardware preferences, such as CPU, memory configuration, and storage sizes.

Unparalleled Security

iWay SaaS on Amazon EC2 offers end-to-end integration in a highly secure environment. The iWay RVI Secure Proxy Service – using the secure AS2 protocol – allows for fully protected robust and secure connections between Amazon EC2 instances of iWay solutions and all internal corporate back-end applications and systems – such as SAP or DB2. All integration activities are processed and executed across well-regulated channels, which utilize proxy gateways, firewalls, virtual private networks (VPNs), and other proven techniques to preserve the integrity of client data at all times.

A Flexible and Scalable Deployment Model

On-demand solutions from iWay Software are not just powerful and economical; they're also flexible and scalable. All instances of iWay Software have already been installed and tested, so clients can begin using new tools and components, cancel services they have already subscribed to, or add new users to their environment at any time.

iWay SaaS supports various integration models, to allow for:

- Secure connections to internal applications, systems, and databases within the corporate firewall
- Access to Internet-based Web servers and databases
- Integration with other SaaS-based solutions such as Salesforce.com

Find Out More

To see how we can help you succeed, visit us at **iwaysoftware.com**, e-mail us at info@iWaySoftware.com, or in the U.S. and Canada, call toll-free **(866) 297-4929**.

Additionally, iWay SaaS for Amazon EC2 solutions are fully customizable, and can be quickly and easily configured by iWay consultants to address unique or specific client requirements. As demand increases, additional instances may be brought online in a very short amount of time.

Convenient Any Time, Anywhere Access

Our SaaS-based tools can be easily deployed as Web-based applications. This provides users with access at any time, from any Internet-enabled location around the globe. Leverage the integrated services from any enabled device regardless of location.

Maximum Affordability

Unlike on-site integration solutions, which impose licensing fees for each user no matter how infrequently they use them, iWay's SaaS-based tools offer a budget-friendly fee structure based solely on hourly system usage.

WebFOCUS Business Intelligence Integration

Advanced reporting features using Information Builders' WebFOCUS business intelligence (BI) platform are readily available via the iWay SaaS solution. Leverage the capabilities of BI and integration with the simplicity of a cloud solution.
